

Self-adhesive strips for indoors + outdoors

OMEGA BASETOP screed membrane

Is a high vapour-impermeable moisture and radon barrier. The special multi-layer sheeting consists of a quality corrosion-resistant aluminium layer with fleece reinforcement on both sides. The sheeting was specially developed as damp-proofing for use on floor slabs with ground contact as a protection against ascending moisture in accordance or on intermediate floors, as vapour barrier above rooms which are subject to a high degree of stress in terms of construction physics. The SK-DUO variant is equipped with adhesive on both sides and enables fast, clean and tight seam tracking during processing.

The OMEGA BASETOP VFK variant is equipped with a full-surface adhesive layer and is available in various widths.

The OMEGA BASETOP SK DUO variant is equipped with adhesive strips on both sides and enables fast, clean and tight seam formation during processing.

- + Watertight
- + Radon-tight
