

Blocan Plus

Complementary food promoting intestinal transit
for dogs and cats

COMPOSITION

Extract of fresh drupes and fresh leaves
of *Olea europaea*;
Vegetable glycerin.

ADDITIVES PER ML

Zootechnical additives

Intestinal flora stabilizers:

Enterococcus faecium

DSM 10663/NCIMB 10415 (4b1705) 2×10^8 UFC.

ANALYTICAL CONSTITUENTS

Crude protein: 0%; Crude oils and fats: 1.5% Crude fiber: 0%;
Crude ash: 2.5%; Sodium: 0%.

INSTRUCTIONS FOR USE

Dogs and cats: 1 pump per 2.5 kg of bodyweight per day.
Administered preferably mixed with dry or wet food. The daily
dose can be divided into 2-3 meals.
It can also be administered directly into the mouth or mixed with
drinking water.

STORAGE CONDITIONS

Store **BLOCAN plus** in its original container at a temperature
below 25°C.

PRESENTATION

100 ml container with dispenser.

Blocan

Plus

PROPERTIES

- Recommended in cases of constipation after eating low fiber food. Lack of fiber can reduce the physiological stimulation of intestinal motor activity.
- To facilitate bowel movements in a wide variety of situations:
 - Constipation during pregnancy
 - Senile states
 - Diets or therapeutic treatments
 - Preoperative or pre-radiological bowel emptying
- Prevention of the formation and expulsion of trichobezoars in dogs and cats. The accumulation of hairballs can cause obstruction and digestive problems.
- Suitable for chronic, intermittent, or accidental constipation caused by poor diet, lack of exercise, anatomical problems, foreign bodies, underlying diseases that can affect bowel function, side effects of certain medications, and stress.

DESCRIPTION OF COMPONENTS

VEGETABLE GLYCERIN

A clear, viscous liquid obtained by hydrolysis from vegetable fats or oils.

It acts by lubricating the gastrointestinal tract to soften and facilitate the movement of stool through the digestive tract.

This type of laxative prevents water absorption by the colon and allows for greater ease of fecal passage.

Recommended for use mixed with food. It can also be administered in drinking water as it is odorless and has a slightly sweet taste.

OLIVE OIL

The incorporation of fiber-rich foods into the regular diet of dogs and cats and the olive oil contained in **BLOCAN plus** will facilitate intestinal transit by helping to hydrate the fecal bolus for evacuation.

Olive oil also provides vitamins and antioxidants that block the action of free radicals, protecting cell membranes.

It improves skin and coat due to the presence of unsaturated fatty acids.

ENTEROCOCCUS FAECIUM

Probiotic that acts as a barrier, hindering the development and adhesion of pathogenic flora in the intestine and helping to reduce permeability.

Its ability to bind to the intestinal epithelium inhibits by competition the adhesion of bacteria, promoting the growth of beneficial microorganisms and correcting digestive imbalances.

It synthesizes short-chain fatty acids and neutralizes the penetration and implantation of harmful substances and toxins.

It stabilizes the intestinal microbiota in various digestive processes and disorders such as dysbiosis, diarrhea, and constipation.
