PRESSURE SPRAYERS - WASHING COLLECTOR

Equipment suitable for the nebulisation of low density lubricating oils, detergents, sterilizers, and so on. When they are filled with liquid for 3/4 of their capacity and air is put inside at 6-8 bar they work automatically without any continuous link to compressed air.

They are suitable for the washing of mechanical parts and items in general. The air-operated working at low pressure (max 0,5 bar) allows the washing with brush with continuous flux, or the washing of the items plunged in the liquid directly in the tank. The lid can be removed and so it is possible to work better.

Brush with nylon bristles for washing collector

For the washing of mechanical parts and items in general. The air-operated working at low pressure (max 0,5 bar) allows the washing with brush with continuous flux, or the washing of the items plunged in the liquid directly in the tank. For a correct use, spill 48-52 l of detergent liquid. The lid can be removed and so it is possible to work better.

WARNING!
Do not use inflammable or corrosive liquids or substances that emanate toxic vapors.
Use exclusively specific chemical products for the washing of mechanical parts, to use only according to regulation furnished by the manufacturer.

They are suitable for service stations and garages, for checking and re-establishing the tyre pressure through the inflating and deflating valve lever. They have automatic charge in order to be ready for use. The operation of inflation and deflation of the tyres will be carried our through a unique three positions lever. To have the tyre inflator ready for use it is enough to put it on the automatic charger installed on the line of the compressed air.
