DIRECTIONS FOR USE
STAINLESS STEEL POTS AND PANS

USE

For an extended lifecycle:
- Do not heat while empty, or over-heat.
- Avoid knocks or sudden temperature changes (if the pan is left on the heat, leave it to cool through contact with air).
- Do not add salt to the water at start of the cooking process: wait until boiling point and stir until dissolved.
- At the end of the cooking process, remove any acidic or sugary food from the recipients to preserve their metal surfaces.
- Wipe down after washing to avoid stains (limescale or loss of shine).
- Use Matfer utensils made with composite materials to avoid damaging your recipients.
- Use appropriate storage.

MAINTENANCE

- Remove any burnt or ingrained particles by soaking in hot water (no added products required) before cleaning with a sponge.
- Do not use abrasive pads, alkaline products, bleach, acidic detergents, oven cleaners, etc.
- Rinse and wipe down after washing.
- In case of limescale deposits or "rainbow" discolouration after cooking highly starchy products, heat with diluted vinegar, leave to cool and wash as normal.
- Limescale deposits which cannot be removed are a result of underlying corrosion.
- Remove stains or marks resulting from over-heating stainless steel using Bistro stainless steel polish.
- To clean the outside of copper recipients, use Bistro copper polish.
- Store in a clean, dry place.

Professional whipper specially designed for cold dairy and/or vegan substitute preparations (soy, rice, coconut, oat, and almond milk and cream). Ideal for making toppings. ISI PROFESSIONAL ECO SERIES CHARGERS

World-renowned chargers, the choice of chefs, pastry chefs, bartenders and mixologists for toppings and hot or cold preparations using dairy products and/or vegan substitutes. Eco Series professional chargers produce a rich, natural whipped cream without any additives. Eco Series 8.4 g professional chargers produce a whipped cream that is superior to conventional chargers, both with dairy products and with alternative products. Depending on the type of cream and the syphon used, the yield can be up to 20% more, without affecting taste, thereby significantly reducing the cost of each portion while improving the nutrient profile (less calories, less fat). Professional chargers contain exactly 8.4 g of N2O, a guaranteed quantity for each charger to ensure consistent preparation quality. Eco Series chargers are produced using 100% renewable energy. Climate neutrality - tested and certified by TÜV Austria - is fully guaranteed by technical innovations leading to emission reductions and by offsetting. Eco Series professional chargers, when used with the Green Whip Eco Series whipper, reduce the carbon footprint between -65% (cream) and -85% (alternative cream) compared to a Cream Whip whipper and a standard professional charger, due in part to offsetting and technical innovations leading to emission reductions. Made in Austria from European steel - a 100% recyclable material with a 40% lower climate impact than Asian steel - the chargers are 100% recyclable (depending on the legislation in each country). 30% recycled steel. Can be used in all iSi whippers. Sale prohibited to minors.

Made from **high-strength, high-quality iron.**

Teflon-free tray.

Protect from moisture, do not immerse (dishwasher, fridge, cold chamber).

Wash without water with a cloth. To oil to avoid corrosion, rust.

PREPARATION TIPS FOR USING BLUE STEEL SHEETS

- The new sheets must be used after a pre-treatment curing process.
- The new sheets must be **heated to 100 °** C for a good hot cleaning, with a piece of cloth. The operation must be repeated three times.
- Then, the sheets or pans must be **greased** with oil or good-quality fat food and **heated at 180°C for 2 hours**.
- **Clean with the piece of cloth once again** when out of the oven, and then grease them.
- They are **ready to be used.** The greasing operation must be repeated before every use.

Reminder: Blued plate sheets are humidity-sensitive.
They should not be stored in a wet environment (cold chamber, fermentation chamber). Clean only with dry cloth. The use of abrasive sponge is forbidden. It can damage the top layer of metal and make it lose its properties. Washing is not recommended. If sheets are washed, make sure to dry them and grease them immediately afterwards, following the above-described process.

Testimonial...

"Matfer's Exoglass® moulds make my everyday work easier. I really appreciate their utilization qualities. Raised dough does not oxidize the moulds, making cleaning easy and fast by hand or in the dishwasher. This material means that I no longer need to grease except for really soft doughs such as fluted patterns and cakes. I can mould-release my tarts, cakes or loaves immediately after removing them from the oven, without any risk of burns. They have beautiful even deep browning, making you want to bite into the cake. I sell a great number of cakes and the individual cake moulds by Exoglass® mounted on a plate, gain a lot of handling time. Buying these moulds is a long-term investment guaranteeing the quality of work of my teams and regular quality of the products sold to my customers in the shop".

Step by step

1 | Place the stainless steel sheet on a flat surface and position the first chosen frame.

2 | Fill the first frame placed on the special sheet with the chosen filling.

3 | Smoothen with a rule.
Cool to harden based on the filling used.

4 | Then place the second frame on the first, use another filling and smoothen.

5 | Proceed in the same way for the third filling.
Freeze the whole set with the sheet if required.

6 | Turn out by removing the frames one by one.
(do not heat with a torch but use a blow air gun instead).

Thus entremets that are ready to cut can be easily made, with successive layers that are uniform providing a beautiful effect and reducing the assembly time.
Layers of biscuits can also be inserted between the fillings.

Quick manufacture of bare or printed chocolate discs and tuiles

Principle of use:
1. Place the plate width-wise on the 1st third of a "guitar" PVC sheet.
2. Position the shuttle at one end of the plate and fill with chocolate.
3. Slide the shuttle to the other end of the plate - as it moves, chocolate fills the perforations.
4. Lift the base and place it on the 2nd third of the sheet.
5. Do the same thing twice more to cover the entire 600 x 400 mm sheet.

Dimensions: 635 x 167 x 82 mm.

CHEF'S TIP:
PLACE THE KIT IN AN OVEN AT 30/35°C BEFORE USE TO AVOID THE CHOCOLATE SOLIDIFYING TOO QUICKLY IN CONTACT WITH THE STAINLESS STEEL

HACCP LABEL, DAYS OF THE WEEK

Ensure customer food safety with an organised and colour-Ref.d labelling system. Most of the label is blank to allow you to write your own text (storage temperatures, operator name, etc.). Traceability labels differentiated by colour for each day of the week to make work easier for operators. These labels can be removed without leaving any sticky residues that could cause cross-contamination, which can occur when containers are stacked. They are easily removed from metal, glass, and plastic. Food rotation labels can help you improve inventory management, manage food expiry dates, and reduce food waste.

HACCP

(Hazard Analysis Critical Control Point) est une méthode de travail qui consiste à mettre en place des procédures de contrôle (identification et prévention des risques, mesures correctives) afin de garantir l'hygiène en cuisine.
Le choix des matériels est important dans le cadre de la mise en place de la démarche HACCP en restauration, en particulier par leur bonne aptitude au nettoyage.
Tous nos matériels facilitent la démarche HACCP.
