

UNIVERSAL STEERING ADAPTER

Universal interface AURA ZWE-WA01 is a ready-made compact module for connection to the head unit of a car. The universal adapter works with all modern car models equipped with "resistive" steering wheels.

AURA ZWE-WA01 has the ability to program functions for any head units that have a remote control in the kit or this option is available. The universal interface has the ability to control both infrared and wired.

Programming of the standard buttons on the steering wheel can be carried out by short and long press, to control various commands of the head unit.

Connection of the universal interface AURA ZWE-WA01

1. Connect the red wire to + 12V through the ignition switch (ACC).
2. Connect the black, green and blue (if necessary) wires of the interface with the wires on the standard connector of the car, according to the electrical diagram (the corresponding wiring diagram for standard connectors for various cars can be found on our website www.aurael.ru).
3. If the head unit does not have a remote control connector, but there is an infrared receiver window, place the infrared emitter of the universal adapter in the ceiling light of the passenger compartment or in another convenient place where direct visibility from the infrared (IR) emitter to the head unit will be provided. The 3.5mm minijack connector is not used in this case and must be insulated.
4. For remote control using a 3.5mm mini-jack, connect it to the corresponding socket of the head unit, the infrared (IR) emitter in this case must be isolated.

Programming the universal interface AURA ZWE-WA01

Each button on the steering wheel can be programmed for one or two commands: for example, the SEEK + button on the steering wheel can be assigned the SEEK + function from the remote control for a short press and the PRESET + function for a long press on the button. Also, for example, you can additionally assign POWER to the MUTE button, and so on.

Important!!! Check that the white wire of the interface is disconnected from the vehicle ground before the programming process!

1. Apply power to the + 12V interface, and one of the LEDs will blink for a short time.
2. Connect the white wire of the interface to the vehicle ground to enter the learning mode of the device.
3. Press and hold the button on the SEEK + steering wheel until one red LED on the interface lights up.
4. Point the remote control at the infrared (IR) emitter of the interface and press the SEEK + button on it for 1-2 seconds. The LED should go out. Otherwise, repeat step 4 from the beginning. The steering wheel button is trained to the command: SEEK +.
5. To assign a second command to the same button on the steering wheel, press and hold it until both red LEDs on the interface light up.
6. Point the remote control at the infrared (IR) emitter of the interface and press the PRESET + button on it for 1-2 seconds. Both LEDs should go out. Otherwise, repeat the steps in step 5 first. The button on the steering wheel is now programmed for two commands: short press: SEEK +, long press: PRESET +.
7. To program the remaining buttons on the steering wheel, follow the same steps as in steps 3 and 4 (5 and 6 as necessary) for other commands.
8. Disconnect the white wire of the interface from the vehicle ground and insulate it.

Your universal interface is now ready to go.

Resetting the AURA ZWE-WA01 interface to factory settings

1. Disconnect + 12V power from the interface, and connect the white wire to the vehicle ground.
2. Apply + 12V power to the interface, both LEDs will blink. All interface settings have been reset to the factory state and now it is possible to program it again.

Detailed instructions for use and connection to the universal steering adapter AURA ZWE-WA01 can be found on our website www.aurael.ru in the "Support" section.
