REVISION A LOS 21 DIAS - LECHO RECEPTOR

An intraoperative photograph showing a dental implant site 21 days after surgery. The implant is a cylindrical, light-colored structure with a textured surface, partially submerged in a red, vascularized tissue bed. The surrounding tissue is pink and shows signs of healing, with some white, fibrous material visible. The text "REVISION A LOS 21 DIAS - LECHO RECEPTOR" is overlaid in the center. A small, faint watermark "Dr. Guillermo Rojas" is visible near the bottom center of the implant.
